

Little Caesar Lettuce

- Plant in Sun  (at least 6 hrs of sun)
- Space 8-12" (20-30cm) apart
- Grows 8-12" (20-30cm) tall by 8-12" (20-30cm) wide
- The key to lettuce production is supplying moderate, but almost constant water—especially during hot weather. Unless there is regular rainfall, lettuce must be watered deeply at least once a week, and more frequently during periods of drought. Use a thin layer of mulch to help the soil retain moisture. Watch for lettuce rot, which first attacks the lower leaves in contact with the soil and then spreads throughout the

plant.

(Cut along dotted line for standard bench card size.)
